Correlation between RPPNL (FLU PCR) and Sofia (FLUAG) - Accuracy 94.4%

In Feb/Mar (7 weeks) 1653 samples were tested by both methods most of them negative, 115/205 samples were positive by EIA when confirmed by PCR. 90 negative EIA samples were tested positive by PCR method. *(ACL correlation data is compiled on samples collected within <48 h). Since positive rate is under-represented and provides correlation on very small fraction of positive samples – interpret clinical sensitivity with caution.*
